

Conditional Probability

$$P(A/B) = \frac{P(A \cap B)}{P(B)}$$

Probability of event A when event B is already occurred.

Multiplication law of Probability

$$P(A \cap B) = P(A) \cdot P(B|A) \rightarrow \text{dependent event}$$

$$P(A \cap B) = P(A) \cdot P(B) \Rightarrow \text{Independent}$$

Q. What is the chance of throwing a total of 11 with dice if the digit on first die is 5.

$$E_1 = \text{total of eleven} = \{(5, 6) (6, 5)\}$$

$$E_2 = \text{first dice shows} = \{(5, 1) (5, 2) (5, 3) (5, 4) (5, 5) (5, 6)\}$$

$$P(E_1/E_2) = \frac{P(E_1 \cap E_2)}{P(E_2)} = \frac{1}{6}$$
